BLANKE LEVITO

BLANKE LEVITO is a three-piece tool set used to avoid high spots, especially when laying large format tiles and slabs. The starter set consists of T-shaped pulling plates (100 pieces for joint widths from 2 mm onwards), tension wedges (100 pieces), and pliers that can be adjusted according to the tile thickness. By setting the tile thickness on the pliers the optimum position can be reached. When the pliers are used the T-shaped pulling plates are pressed against the tile from below, so that the tiles are adjusted to the exact height on the upper side. The wedge fixes the position until the tile adhesive has hardened. Subsequently the upper part of the T-piece is removed at the breaking point. At the same time this leg also works as a spacer to produce a uniform joint pattern.

Expert tip:

- Wedges and adaptors can be used more than once
- With the help of the table you can calculate the number of wedges and T-shaped pulling plates required per m²

BLANKE LEVITO STARTER-SET

INCL. 100 WEDGES, 100 T-SHAPED PULLING PLATES (ART. NO. 251-900) AND PLIERS
