## Sealing for seamless bathrooms

### NEW BLANKE DISK FLB

BLANKE DISK FLB is another variant of the first and only self-adhesive waterproofing system on the market with a special surface for an ideal connection with cartridge adhesives such as those used for seamless rear walls made of composite aluminium, glass and other materials. The tested all-in-one system offers you standard-compliant solutions for every detail - from the primer to tapes, corners, collars and the waterproofing membrane, through to the perfectly matching linear and point drainage systems with integrated BLANKE DISK waterproofing membrane. The system does not require any drying time so that the wall panels in the bathroom and shower can be bonded to the sealing immediately.
